

## Southcentral PA Students Free Heart Screening Clinic

This free heart screening clinic is open to students in southcentral PA, ages 12 to 19, who are not currently under the care of a cardiologist. All students will receive a free vitals check and electrocardiogram (EKG). For students whose results indicate the need for additional testing, echocardiograms will also be provided on site, free of charge.

### DATE / TIME

Children's Hospital

Pennsylvania State Representative  
Kristin Phillips-Hill

### About Sudden Cardiac Arrest (SCA)

- SCA is the #1 killer of student athletes.
- Every three days, a student dies from SCA.
- Some warning symptoms of SCA include dizziness, fainting, shortness of breath or chest pain.
- The first symptom of SCA is often sudden death.
- One out of every 100 students screened is found to have a previously undetected heart condition.

**The Peyton Walker Foundation** was established in honor of Peyton Walker, a 2012 Trinity High School graduate who passed away unexpectedly from sudden cardiac arrest at age 19. The Foundation is offering this routine heart screening at no cost for students as a means of early detection for heart-related issues.
